Leelanau County Road Commission
Leelanau Township, county of Leelanau

Re: Gills Pier road Natural Beauty

Cherry Capital Connection, LLC (CCC) originally submitted a route along the west side of the roadway. We anticipated boring along this path. Feedback from the Leelanau County Road Commission required utilities to be 28-33 feet from center line of roadway encourage an analysis of this original route. We estimated that at minimum 16 locations would require trees to be removed to accommodate the boring machine operations.

Current utilities dominate the west side of the road and follow a path that utilizes the tree line on the roadside. CCC proposes knifing the mainline fiber on the east side of the road. We will position the vaults to line up with the corresponding driveways on the west side. By doing this no trees will need to be removed for doing road crossings.

Attached are the updated staking sheets.

There are an estimated 4 existing utility crossing that will need to be addressed.

The ecological impact will be minimal.

The vaults placed on the west side should be in the 28 - 33 foot utility right of way and will be positioned near the driveway. Placing of these vaults along the driveway will minimize the impact on the natural area. Knifing to the home will follow the driveway.

All but three homes have signed up for the service. Each of the signups has been made aware of this approach.
